PROCESSES AND PROPERTIES INDEX

High-Strength Castings. L. Frank. (Outokumpu, 1951, vol. 2, Feb., pp. 25-30; Kottmann's Lapid., 1951, vol. 6, Feb.). [In Hungarian]. Developments in the production of high-grade cast irons are reviewed and their use in several countries is discussed. Consumption of malleable iron at the Stalingrad Tractor Works has decreased 90% since inoculated cast iron was introduced in 1948; details of the production process are given. A cellular cast iron is used to produce cast crankshafts for 40-h.p. diesel engines. There are insufficient heat-treatment furnaces in Hungary for making malleable iron castings. The heat-treatment time can be reduced to 12-17 hr. by using a very low silicon iron and making silicon-magnesium additions. An iron which can be rolled can be made by adding silicon-magnesium alloy to liquid iron very low in sulphur, phosphorus, and manganese.

Chislennyye metody v gazovoy dinamike (Numerical methods in gas dynamics), 3-27

TOPIC TAGS: numerical analysis, incorrect Cauchy problem, difference scheme,
initial data smoothing

ABSTRACT: The solution of the Cauchy problem for the model equation

$$\frac{\partial u}{\partial t} = \frac{1}{t} \frac{\partial u}{\partial x}, \quad (1)$$

is analyzed under *a priori* assumptions that the solution exists and is bounded in the strip

$$T_1 < t < T_2 \quad (T_1 < 0, T_2 > 0).$$

Card 1/2

L 19428-65

ACCESSION NR: AT5013279

The conditional correctness (according to Tikhonov) of this problem is established, and the Cauchy problem for the finite-difference equation, approximating equation (1), is formulated and studied for the case when the strip of existence of solution $u(x, t)$ contains the straight line $t = 0$, on which the initial conditions of the Cauchy problem are given. A new definition of the stability of a difference scheme is presented, its convergence is proved, and the approximation error is established. An example is presented showing that when the line $t = 0$ is on the boundary of the domain of existence of solutions, the difference scheme approximating the differential equation is divergent. To obtain a convergent process, the smoothing of initial data is carried out, and the proposed stable scheme is applied. The estimate of the rate of convergence of the computation process is derived. It is shown how the obtained results can be extended to the solution of the incorrect Cauchy problem for a system of equations with constant coefficients. Orig. art. has: 35 formulas. [LK]

16

REF SOURCE: Sb. rabot Vychisl. tsentra Mosk. un-ta, v.4, 1965, 3-27

TOPIC TAGS: numeric solution, approximation convergence, difference method, *Cauchy problem*, mathematic model

ABSTRACT: The Cauchy problem is investigated under the a priori assumption of the existence and boundedness of the solution in the interval $T_1 < t < T_2$ ($T_1 \leq 0$; $T_2 > 0$) for the model equation: $\partial u / \partial t = (1/i)(\partial u / \partial x)$. Conditional correctness of this problem is established and convergence of the solutions of stable and approximating difference schemes is proved. Errors are estimated. An example is introduced showing that if the line of initial conditions is the boundary of solution existence, than any homogeneous difference scheme approximating the differential equation is divergent. Smoothing of the initial conditions is used to attain convergence. [Translation].

TITLE: Difference methods for solving the Cauchy problem for incorrect first-order systems

SOURCE: Moscow. Universitet. Vestnik. Seriya 1. Matematika, mekhanika, no. 1, 1966, 3-11

TOPIC TAGS: Canchy problem, first order system, incorrect problem, difference scheme

ABSTRACT: The possibility of applying different methods to approximate solutions in the strip $-\infty < x < \infty, 0 \leq t \leq T$ of the Cauchy problem for the system of equations

$$\frac{\partial u}{\partial t} = A \frac{1}{t} \frac{\partial u}{\partial x}, \quad (1)$$

with initial conditions

$$u(0, x) = \varphi(x), \quad (2)$$

Card 1/2

UDC: 517.5

L 13646-66

ACC NR: AP6003436

where A is a constant $p \times p$ matrix reducible to a diagonal form and $u(t, x)$ and $\phi(x)$ are vector functions of the p -th order is analyzed under the assumption that the solution $u(t, x)$ of problem (1) - (2) satisfies the condition

$$\|u(t)\|_2^2 = \int_{-\infty}^{\infty} \left(|u(t, x)|^2 + \left| \frac{\partial u}{\partial x^j} \right|^2 \right) dx < \infty \quad (3)$$

It is proven that the problem defined here is correct in the sense of A. N. Tikhonov (the solution is unique and continuously dependent on the initial conditions). A difference scheme approximating the Cauchy problem is presented for which the concepts of its q -approximation and γ -stability are formulated. It is proved that such a γ -stable and q -approximating difference scheme is convergent. The rate of convergence of the difference scheme when the mesh side tends to zero is established. Orig. art. has: 14 formulas. [LK]

 with the mineral water of well no. 11 of the artesian spring in
 Margitsziget, Budapest, Hungary. contg. Na 166.3, Ca
 157.2, Mg 30.8, Fe 0.0, Cl 185.2, HCO_3^- 575.17, SO_4
 195.8, and free CO_2 262.1 mg/1000 g. One l. water was
 mixed with 40 ml. 1.5% H_2O_2 , and the amt. of undecomposed
 H_2O_2 was detd. after regular intervals for 10 days. The
 rates of decompn. of H_2O_2 expressed as percentage of the
 total amt. of H_2O_2 added after 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10
 days were 13.35, 19.97, 25.97, 30.84, 35.51, 39.80, 44.80,
 47.90, 51.10, and 54.50%, resp. Calcn. of the reaction
 velocity and the regularity of the process indicated 2 parallel
 reactions: one a nonmolecular reaction showing an ex-
 ponential curve with a very rapid decompn. and another
 slow unimol. decompn. Reaction velocities may play a con-
 siderable role in the bio. effect of mineral waters used in
 drinking cures. Istvan Endre

Title : Jelly-like Cancer of the Upper Part of the Jejunum

Orig Pub : Zbl. Chirarg., 1956, 81, No 14, 563-572

Abstract : Reports a case of a jelly-like cancer of the jejunum, in a woman 52 years of age. The tumor was located 50-60 centimeters lower the flexura duodeno-jejunalis. No metastasis observed. Histologically, a pattern of highly differentiated adenocarcinoma, was revealed, with profuse discharge of mucus, and considered as a product of a specific activity of tumor cells. -- M.A. Shalevich

A 'protein index' derived from measurements of serum before and after deprotein-
ization is believed to be related to SH levels. The index falls in chronic hepatitis
and, transiently, in the acute stage of virus hepatitis. It rises in hepatic cirrhosis.
